Submersible Ionic System Purifier of Water - A "Natural Alternative" to Chlorine...

"An Informed Shopper prefers AquaSmarter"

A Natural alternative to Chlorine...

Purification system for Water

Water, Ions and Life

Many problems exist when refers to the pure water. The contamination of the water sometimes is alarming. If the water is purified with chlorine and other chemicals, we contaminate ourselves with them, to be able to have "pure water". The same thing happens to the pools, Jacuzzis and fountains.

In Europe there are countries in that chlorine is never used to purify water in any way. Many studies have been made about the danger of the use chlorine, everything is demonstrated. On January 23 of the year 2001, in the "Republica", section of Health, Gallery 3B, they published an article about "Take care your Lungs", study was made in Belgium indicated the chlorine in the water could cause allergies, asthma and cancer, so much so it was considering to "propose that the children smaller than six years stop to go to the pools."

But then, what can you use? Ionization!

What's there good in the ionization?

In the Book "The effect of the Ions" from Fred Soyk and Alan Edmonds, is demonstrated the advantages of the negative ionization, that's the ionization type used to purify the water. They use the Ionization of the air, but with the water works too. Inside the therapies based on negative ions they have been psychiatric patient, they cure asthma attacks and bronchitis, benefits have been seen it with people burns too. It removes the bad humor. The negative ions stimulate the activity of our sexual organs, it revitalizes, the capacity of physical work increases and it improves the tone of the public health.

Any science man neither doctor has ever found that an excessive dose of negative ions produces another result that to maintain one sleepless and activated during more time of the normal"

Actually, AquaSmarter is a company from Costa Rica, located in Liberia, Guanacaste where the batteries are manufactured and we want to implement the system in the whole country. Some of the most important hotels use AquaSmarter because they are happy with the benefits of their clients and likewise they obtain substantial savings.

During the first trans-oceanic trips many people died in those trips were not of hunger or wars but of poisoning. Yes, poisoning for the sweet water that they took to survive the voyage. As the water they kept it in wooden barrels, it was water stagnated that when running of the weeks it makes me bad. Suddenly somebody realized that putting a silver piece and copper in the water, this stayed fresh through the whole voyage.

Years ago, in 1982, an owner of pools knew that it should have a better and surer way to protect his family of algae and bacteria without using chlorine. In the search he discovered this ionization process used in the ships hundred of years ago. This process, is called Galvanic Action, it makes ions when expose metals with the water. These ions or particles negatively control 100% the

growth of all the types of algae and bacteria. The Dr. Stephen Verdon, creator of the system AquaSmarter delayed two years to perfect and to patent the formula of a battery or pill that it lasts 12 months, and other two until obtain the approval of the department of Health to throw it to the market. Finally when he made it was happy because almost he had to sale until the cat and dog to be able to make all the studies that gave him the perfect formula with the correct proportion of metals (they are 4 that are used) so that it was sure for the human being.

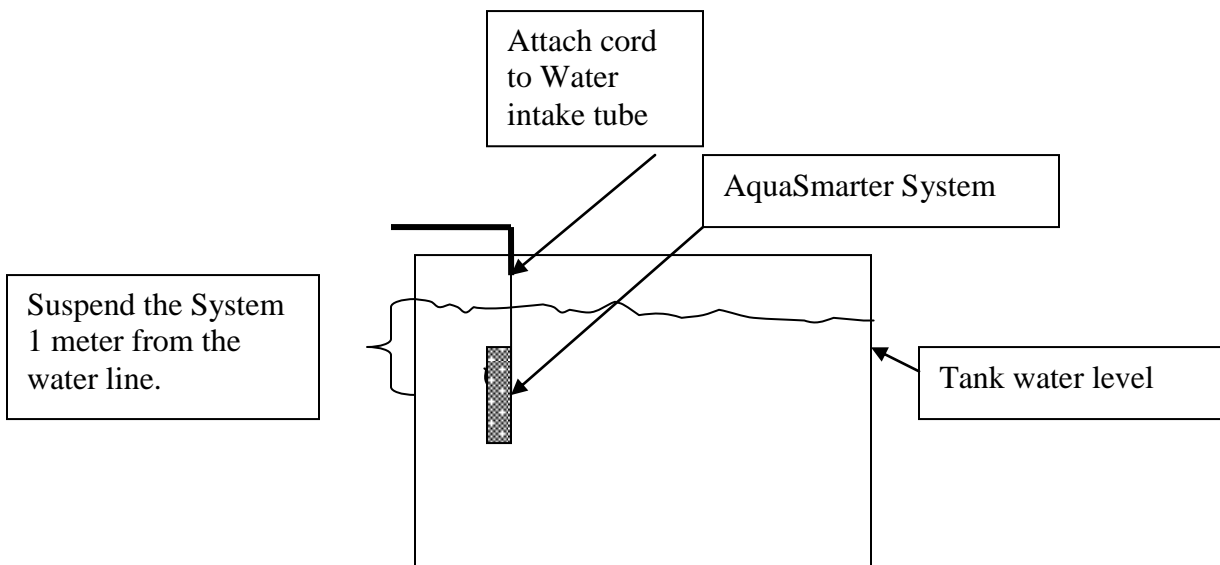

How does it work the system AquaSmarter ...for Water?

Carefully measured amounts of **Pure-Silver** (of less than 2ppm); **Copper** (of less than 4ppm); **Zinc** and **Carbon** as a catalyst or booster are blended together, extruded into thin wiring and coiled to create an Electromagnetic Process called, "Galvanic Action".

When the AquaSmarter Ionizing Ionic Battery is submersed in water, the metals begin to slowly deteriorate and produce "Ionization" or negatively charged sub-atomic particles. These negatively charged ions which after a period of 2-weeks, completely permeate the pool to seek out and neutralize 100% of all types of algae and bacteria.

Another added benefit to this process is that these negatively charged particles magnetically attract dirt, dust and other forms of debris that continually enter the pool and collectively drops them to the bottom. Your water tank maintains a crystal clear, bacteria, algae and dirt-free environment 24-hours a day, all year long. If this was true and the tank has an opening then for maintenance it's recommended that when it's seen dirt or accumulation of residuals in the tank, then to make a process with the cleaner to remove these residuals of the bottom of the tank.

How to install AquaSmarter in a water Tank

To Whom It May Concern:

I have been in charge of the Flamingo Beach Aqueduct since 1986 and we had before a lot of problems with the calcium deposits because of the excess calcium in the water. In order to maintain the water potable we had to add a great amount of chlorine and the users complained.

Ever since ChlorFree-CalcAway was installed the maintenance has become much easier. The water for human consumption is pure, smooth, crystalline, sparkles and without the taste of chlorine. We have no more problems with the ice makers, shower fittings or pipes with the calcium anymore.

The holding tanks maintenance is much simpler because we had a lot of sediment on the bottom, cleaning them is easier and we don't have to be throwing chemicals all along or in excess.

The laboratory results are always good therefore we recommend the ChlorFree – CalcAway Systems to purify Potable Water.

We also use it in swimming pools and it gives us wonderful results.

We have used the ChlorFree-CalcAway System for over 6 years up to this date.

Sincerely,

5-180 720

Arnold Contreras Cedeño
Chief Maintenance
Flamingo Beach Aqueduct

CERTIFICACIÓN

La Dirección de Registros y Controles, en virtud de las facultades que le confiere la Legislación Vigente del País, Ley General de Salud, certifica que el producto: **CHLORFREE, PURIFICADOR DE AGUAS DE PISCINAS, SPA'S Y POTABILIZADOR DE AGUA, no requiere de registro sanitario**, por clasificar como **"no peligroso"** según los criterios establecidos en el Decreto Ejecutivo 28113-S, publicado el seis de octubre de 1999 en el Alcance 74, a La Gaceta 194, Anexo 1.

San José, Costa Rica **29 de MAYO del 2007.-**
Certification

Atentamente,

Dra. María Felicia Mora Haug, JEFE
UNIDAD DE REGISTROS Y CONTROLES

The Direction of Registries and Controls, by virtue of the faculty that confers it the Legislation effective of the country's general Law of Health, certifies that the product ChlorFree for purifying swimming pool's water, spas and potabilizator of waters does not require of sanitary registry because it qualifies as "Nondangerous" according criteria established in the Executive Decree 28113-S published the 6 of October 1999 in Alcance 74 to Newspaper La Gaceta 194, Ann100
